Heroku

Heroku is a really nice hosting platform which sits on top of Amazon Web Services. It is reliable and they manage a lot of the day-to-day infrastructure maintenance, so I can focus on your application. Hosting costs will be around $20 a month.

1. Go to the Heroku login page and create a free account.
2. Once logged in to your dashboard click the Team drop down in the upper left (looks like a person avatar - probably called Personal) and click New Team
3. Name your team `{Heroku Team Name}` and add a billing credit card
4. Once the team is created, click Access, then click Invite User
5. Invite me `{Heroku email}` and give me Admin permissions.
